This month's highlighted unit is from our new Aventus pre-configured air handling line. The Aventus products are known for their high-efficiencies, driven by industry leading energy recovery technologies and packaged refrigeration, are also available in a more tradition rooftop unit configuration . That is the case with this unit for a hospital cancer treatment facility. The project was originally designed around another rooftop unit manufacturer prior to the COVID-19 outbreak. In response to the pandemic the customer requested upgraded components (like 12" final filters) that the "other guys" didn't have the flexibility to include in their offering. Aventus to the rescue!

Unit highlights:

- 2" Double wall injected foam panels
- Outdoor unit with 18 gauge acrylic painted exterior & 18 gauge galvanized interior
- 2" MERV 8 RA filter & 12" MERV 15 final filter
- 409 S.S. Indirect gas fired heater (10:1 turndown)
- DX Coil with ACCU (variable lead compressor)
- Supply and exhaust air fans
 - ◆ Direct drive, premium efficient, & ODP motors with shaft grounding rings
- DDC controls with BACnet MSTP communications
- Recessed NEMA 3R electrical enclosure
- Single power point connection, with a 35K SCCR

Model:	AVT-D05-00-AC018 IG200	
Height:	92"	
Width:	72"	
Length:	160"	
Weight:	3,500 lbs	
Supply CFM:	5,000	
Return/Exh CFM:	5,000 / 3,500	
Cool type:	DX w/ ACCU	
Cooling capacity:	17.5 Tons	1 circuits
Heating type:	Indirect gas heat	
Heating capacity:	160 MBH output	10:1 turndown
